

The Great Reset Agenda – Economic Destruction and War

In 2024, a sad record number of company insolvencies was recorded. Additionally, production sites in the automotive and chemical industries are to be closed and tens of thousands of employees made redundant. This economic decline is no coincidence! Economically strong countries such as Germany in particular must be weakened in order to establish a New World Order envisioned by High Degree Freemasons. This broadcast documents the economic destruction of Germany and therefore the self-destruction process of the EU set in motion through politics. It sheds light on the goals that are actually being pursued by the current war policy! That's why you should be sharing educational broadcasts like this!

Germany recorded a sad record of around 22,400 corporate insolvencies in 2024. The figure rose by almost 25% compared to the previous year and, according to credit reform, a consortium that also operates internationally as a debt collection service provider, marks the highest level since 2015. At the beginning of 2025, almost all companies in the automotive and chemical industries, as well as many other sectors, reported a drop in sales and profits. Locations are to be closed and tens of thousands of employees to be made redundant. These reports make it clear that Germany's economic downturn in 2025 is far from over.

As Kla.TV pointed out in the program "The Conspiracy to Destroy Germany" (<https://www.kla.tv/36607>), this development is no coincidence. Germany – like almost all countries in the world – is firmly in the grip of the High Degree Masonic financial mafia, which has obviously infiltrated trade unions, companies, the media and even politics. Top German politicians are often members of their elite associations and think tanks, such as the Atlantic Bridge, the German Marshall Fund, the Atlantic Council or the Trilateral Commission. There are also close links between top German politicians and the World Economic Forum (WEF) as well as the Bilderberg Group. Olaf Scholz and the former German Chancellor Angela Merkel are even High Degree Freemasons themselves and members of their original lodges. The EU, which dictates its member states down to the level of national legislation, is also a hub of this secret society. (<https://www.kla.tv/36800>) Accordingly, the President of the EU, Ursula von der Leyen, also has close ties with them. She has attended the annual Bilderberg Conference four times and has close ties to the High Degree Freemasons Klaus Schwab and David M. Rubenstein.

The common goal of the High Degree Freemasons is the establishment of a New World Order with a one-world government – for their benefit and not for the benefit of the world's population. David Rockefeller outlined the path to achieving this goal as follows: "We are on the verge of a global transformation." "All we need is the right major crisis and the nations will accept the New World Order."

As a result, the coronavirus crisis was the ideal springboard into this New World Order – particularly through the destruction of the economy. The founder of the World Economic

Forum, Klaus Schwab, immediately presented his “Great Reset” to the world as a solution and a new beginning. In a promotional video, the WEF coined the meaningful slogan: “You will own nothing and be happy”.

To achieve this, economically strong countries such as Germany and the EU member states in particular must be weakened and dismantled. As statistics show, the top politicians controlled by the high-degree Freemasons have been successfully implementing this strategy for some time now. Industrial production in Germany, for example, has already fallen by 16% since its peak and is now around 26% below the level it should actually be. Financial expert Dr. Markus Krall commented on this decline as follows:

“It didn’t start with the traffic light government and it didn’t start with Covid. In principle, we reached the peak of industrial production in 2016. And basically from 2016 onwards – and Ms. Merkel was still at the helm for a long time – things went downhill. Ms. Merkel and her cabinet have thoroughly prepared and initiated this industrial crisis in Germany and the Ampel (traffic light government) has now elevated it to an art form. This is the typical sign of an industrial collapse that we see here. Our industrial production is declining more sharply than in any industrialized country in the world. [...] What we are experiencing here is leading to the dismantling of the entire industry in Germany.”

According to Dr. Krall, Germany’s economic decline is therefore not a consequence of external influences or crises, but was initiated by the government of the High Degree Freemason Angela Merkel. Her lodge brother and successor in the Chancellery, Olaf Scholz, then successfully continued this work.

For a deeper understanding of the context, the economic destruction of Germany and the resulting self-destruction process of the EU will be documented in the following. Finally, the connection between this economic decline and the EU’s current policy of escalation towards Russia and the role of the media in this worrying development will be examined.

I. Documentation of Germany’s Economic Destruction and the EU by Politics

1. EU Policy destroys Competitiveness and Prosperity

According to the ifo-Institute (“Leibniz Institute for Economic Research at the University of Munich”), the flood of laws and regulations is a major cause of the weak growth in Germany and also in the EU. The EU alone has adopted more than 13,000 legal acts in the past five years. As a result, the member states have been overwhelmed by a tidal wave of regulations and requirements, many of which do more harm than good. Added to this is the EU climate policy with its devastating consequences for the German and European economy. The ban on the approval of new fossil combustion engines in cars from 2035 onwards alone means that a further 190,000 jobs are likely to be lost in the automotive industry and entire plants will have to be closed. The EU is thus proving to be a real economic killer, destroying jobs and thus the prosperity of its own population.

2. The Consequences of Corona and Ukraine Policies

The German economy has lost around 545 billion EUR since 2020 as a result of the Coronavirus and Ukraine policies, according to the German Economic Institute (IW). In addition, the German population is losing around 160 billion euros in prosperity – due to the energy crisis triggered by the Russia sanctions alone. According to calculations by the Hans Boeckler Foundation, German citizens have become around 2,600 euros poorer per capita per year as a result of the war in Ukraine. The average in the EU Zone is around 880 euros -

meaning that Germans have been hit three times as hard.

3. The Consequences of Climate and Energy Policies

The costs of the politically enforced transformation of the energy sector to so-called renewable energies are gigantic and extremely serious for Germany as an industrial location. The following figures represent just the tip of the iceberg:

- The economic damage caused by the nuclear phase-out is estimated at 340 billion euros.
- The decommissioning of Germany's coal-fired power plants has so far cost taxpayers 317 million euros. In addition, billions will be paid in compensation to the energy companies for the decommissioning of their power plants.
- According to the global management and strategy consultancy McKinsey, the total cost of the energy transition in Germany could be as high as six trillion euros.
- Due to the strong fluctuations in electricity generation from photovoltaic and wind power plants, electricity has to be sold abroad when there is overproduction and imported at maximum prices when there is a shortage of electricity. The costs of this amounted to almost 20 billion euros in 2024 alone and at peak times 100 million euros in a single day!

4. The Effects of this Destructive Policy

Deindustrialization of Germany

Gas prices in Germany are now up to seven times higher and electricity prices up to five times higher than in competing locations in other countries. This forces companies to relocate and poses a direct threat to Germany as an industrial location. According to a survey by the German Chamber of Commerce and Industry (DIHK), four out of ten companies are already thinking about reducing their production in Germany or relocating it abroad due to energy prices. A look at the cash flows underlines the dramatic nature of this development: According to data from the German Economic Institute (IW), a net 319 billion EUR in investments flowed out of Germany between 2021 and 2023! These are the highest net outflows ever recorded in Germany. According to the IW, as they have been at such extreme levels for three years in a row, this trend points to a coming deindustrialization – a development that is currently obviously increasingly accelerating.

Destruction of Jobs and Impoverishment

The consequences of this destructive economic policy for the German labor market are devastating. According to economic policy analyst Egon W. Kreutzer, a total of almost 2.6 million jobs were destroyed in Germany in this way in the period from September 2019 to January 2025 alone. Behind this figure are millions of livelihoods, businesses, families and an enormous loss of prosperity. While the poverty rate in 2014 was 15.4% or around 12.5 million people, this rose to 20.9% or 17.6 million people in 2024. A development that is completely in line with the Great Reset agenda: you will own nothing - i.e. be completely impoverished – and be happy.

II. Germany's and the EU's initiated Economic Self-Destruction Process

According to financial experts such as Dr. Markus Krall and Ernst Wolff, we are only at the beginning of a catastrophic economic development. This affects not only Germany, but the entire EU. According to Dr. Krall, we could be facing the biggest wave of bankruptcies in the history of Germany since 1929. This, in turn, would place a heavy burden on the already hard-hit banking sector. High loan defaults due to corporate insolvencies could trigger one of

the biggest banking crises. Additionally, there are also fears that the Euro will depreciate in value more and more because Germany and the EU are becoming increasingly unattractive as a business location for investors. According to financial experts, the associated loss of purchasing power could then destroy national wealth on a large scale, causing the poverty rate to skyrocket even further.

In summary, this means that Germany and also the EU have been deliberately destroyed economically by the policies steered by the high-degree Freemasons and may possibly be facing economic collapse in the near future. The consequences for the population would be catastrophic, which is why the puppet masters in the background are doing everything they can to cover up their criminal actions or deflect the blame from themselves. In this context, the EU's and Germany's current policy of confrontation with Russia takes on a completely new dimension.

III Is a War against Russia brewing?

In view of the fact that the EU and Germany in particular want to mobilize hundreds of billions of euros for their own armament and support for Ukraine, the renowned financial and geopolitical analyst Martin Armstrong warns of a major war in Europe. He replied to questions about the reason for this policy of escalation towards Russia:

"Because they all are facing the collapse of the European Union. The debt is just unbelievable. They never consolidated. Between Covid, climate change and sanctions against Russia, the German economy has shrunk by 3% to 5%. The economic growth of the EU is appalling. Europe is falling and this is why they need war. So, they are backing Zelensky."

Armstrong warned of this scenario at the beginning of the war in Ukraine:

"Everything you can imagine they are doing to Russia is to cover their own ass, really. [...] So this is all deliberate. There is no return to normal here. They want Russia to do something. [...] And unfortunately, we are headed for war."

War as a diversionary tactic and argument to stimulate the economy with hundreds of billions of new debt to distract from the previous sabotage? Or war as the final blow of the high-degree Freemasons for the final destruction of Europe? Presumably both goals are being pursued with this war policy. The consequences for the countries of Europe would be catastrophic in any case. A war would also be the great crisis that David Rockefeller had predicted. This is a truly diabolical agenda, according to which destruction and unspeakable suffering will first be brought upon the peoples so that they will finally capitulate to the New World Order of these criminals.

Conclusion

As Kla.TV has revealed in many programs, it is one and the same high-degree Masonic cult that is responsible for all the misery in this world. Be it hunger (<https://www.kla.tv/15577>), war (<https://www.kla.tv/28259>; <https://www.kla.tv/29688>) or epidemics (<https://www.kla.tv/26784>), the whole world is literally caught in their net (<https://www.kla.tv/13930>; <https://www.kla.tv/28338>). The only difference at the moment is that Germany and the EU are now obviously directly in their crosshairs. According to the well-known bestselling author Gerhard Wisnewski, politicians and the media are utilizing psychological warfare to conceal and implement their plans. People are constantly kept in a kind of panic mode by ever new media shock reports, making them controllable at will. In this way, the majority of Germans

have been won over to a policy that is destroying their own prosperity and which might now be conjuring up a new major war in Europe.

Since the power of these diabolical puppet masters is based above all else on the media, this is also their greatest weakness! If the informational sovereignty of the mainstream media falls, the entire power structure of the high-degree Freemasons will crumble! As menacing as the contexts presented are, the opportunities they open up are unique. As more and more people feel the consequences of this destructive Masonic policy, they are also beginning to question politics and the media more and more. Trust is waning and they are becoming open to serious alternative reporting.

Therefore, disseminate educational programs like this one. This is the decisive contribution to thwarting the plans of this gang of criminals.
